

A PLANET ORGANIZED BY HUMANS

PREDICTIONS
PREDICTIONS!!

Compound Interest $A = P(1 + r/n)^{nt}$
 A = Amount accumulated,
 n = compounding's per period

Rule of 72 = $72/r$
 r = interest rate

Cash Flow = Income - Expenses

Happy Planet Index-

Wellbeing x Life expectancy
 Ecological footprint

Government funding feeds the roots of the world. By providing money to various institutions it also forms the basis of the creation and circulation of money. A popular way to derive the effect it has on the population is to use the Keynesian formula.

The deficit of many countries is explained by 2 simple equations-
 $(\text{Debt at time } t+1) = (\text{Debt at time } t) + (\text{Deficit for year } t)$
 $(\text{Deficit in year } t) = (\text{Debt at time } t+1) - (\text{Debt at time } t)$
