

Unspeakable Maths

By Thomas Wright

The Theme

Maths and maths vocabulary.

How it works

This game works by a teammate having a card with a maths term on, that they need to describe to the rest of their team, but the card also includes a list of other words that they are not allowed to say; so this makes it a lot harder. They have 30 seconds to describe as many words as possible. The member of the other team has to stand behind the player to make sure that they do not use any of the banned words.

Strategies for winning

Thinking outside of the box to not say the answer and other words which have been given to you.

Work quickly to get as many words guessed in the time limit.

Maths in the game

There is maths in this game because you are describing maths terms to your teammate(s), so you have to understand what the terms mean .
